DSPi – enclosure bottom sticker (QR code to the guide)

Print at ACTUAL SIZE (100 %), not "fit to page". The scale bar below must measure exactly 50 mm.
The large sticker matches the enclosure bottom (70.8 × 68.8 mm); the 10 × 10 mm corner notches leave room for rubber feet.
The print stops 2 mm before the cut – margin for the laminating film. Laminate, then cut along the dashed line.
The QR code uses higher error correction (Q) and reads even through glossy film. Test it with a phone before sticking.
Small stickers below: QR code only, e.g. for a cable, a parts box or a drawer.
